

NAGRA MPS
Multiple Power Supply

Stand-alone ultra high performance power supply

To get the very best out of your Nagra system

Designed to power up to four Nagra units at once, as well as the BPS compact phono preamplifier, the Nagra MPS power supply comes in a stand-alone aluminium case which adopts the same size and form as the brand's other electronics. It represents the ultimate solution for anyone who wants to get the best out of a Nagra system. This multiple power supply goes as far as technology currently allows in terms of silent running, stability and dynamic performance. It enables the equipment connected to it to increase its overall musical qualities, giving rise to a reproduction which is even more realistic, alive and detailed, creating a full soundstage.

The Nagra MPS power supply adopts a strictly no-compromise approach. Its circuits are based around an oversized transformer, designed by Nagra, whose four outputs are galvanically isolated. The unit benefits from massive filtering thanks to its high capacity condensers which completely isolate it from the ever increasing disturbances to which the mains is prone. Each output possesses its own ultra low noise regulatory circuit which ensures perfect voltage stability under all circumstances. One of the outputs (No. 1) has also been

designed to accept an optional rechargeable battery in order to power a phono preamplifier such as the Nagra VPS, for example, in total silence.

The Nagra MPS power supply's front panel features a display where the user can choose to show the mains voltage, the voltage of each output and the state of the battery charge if relevant. The power supply can be switched on via a Nagra remote control. It comes with input and output triggers which can be run by a home automation system, so that in conjunction with an appropriate device, the machine can be switched on remotely by telephone, for instance. The home automation loop can also be used to switch on other elements of the hi-fi system.

SPECIFICATIONS

Compatibility: Nagra PL-L, VPS, BPS, Jazz, Melody preamplifiers.

Nagra CD players. **Outputs:** Nos. 1 to 4 with Lemo connectors. 12 VDC, 1A, linear sound 10 Hz – 300 kHz, 150 µV max.

Home automation input and outputs: 3.5mm jack connectors, output switched by relay (max 1A). **Mains supply:** 100, 115 or 230 VAC, ±10%. **Connecting cords (optional):** shielded cable, platted sleeving, Lemo connectors, in 75cm or 1.25m lengths. Other lengths available on request.
